# MISSISSIPPI STATE DEPARTMENT OF HEALTH JULI-2 AMIL: 4! BUREAU OF PUBLIC WATER SUPPLY CCR CERTIFICATION CALENDAR YEAR 2013 Utility Services LLC Public Water Supply Name M.5 0230004 List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply.

In the table below you will find many terms and abbreviations you we've provided the following definitions: may not be familiar with. To help you better understand these terms,

DEFINITIONS

is not present. Non-Detects (ND)- laboratory analysis indicates that the constituent

penny in \$10,000,000. per billion corresponds to one minute in 2,000 years, or a single in \$10,000. Parts per billion (ppb) or Micrograms per liter (ug/L) - one part

per million corresponds to one minute in two years or a single penny

Parts per million (ppm) or Milligrams per liter (mg/L) - one part

were found to be positive. Positive samples/month— Number of samples taken monthly that

NA—Not applicable.

NR—Monitoring not required, but recommended

system must follow. exceeded, triggers treatment or other requirements that a water Action Level (AL) - the concentration of a contaminant, that if

process intended to reduce the level of a contaminant in drinking Treatment Technique (TT) - a treatment technique is a required

is the highest level of a contaminant that is allowed in drinking water.

Maximum contaminant level (MCL) - the "Maximum Allowed" MCL

expected risk to human health. MCLG's allow for a margin of safety. of a contaminant in drinking water below which there is no known or MCL's are set as close to the MCLG's as feasible, using the best Maximum contaminant level goal (MCLG) - the "Goal" is the level available treatment technology.

dence that addition of a disinfectant is necessary for control of mia disinfectant allowed in drinking water. There is convincing evicrobial contaminants. Maximum residual disinfectant level (MRDL) - the highest level of

of disinfectants to control microbial contaminants a drinking water disinfectant below which there is no known or expected risk to health. MRDLG's do not reflect the benefits of the use Maximum residual disinfectant level goal (MRDLG) - The level of The Water We Drink - Utility Services, LLC is pleased to present our Annual Water Quality Report for the year 2013. This report is designed to inform you about the quality of your water and the services we deliver to you every day.

Is My Water Safe? Yes, last year your tap water met all U.S. EPA and state drinking water standards. Utility Services diligently safeguards its water supplies and once again we are proud to report that our system has not violated a maximum contaminant level (MCL) or any other drinking water quality standards.

Do I need to take any special precautions? Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/Aids or other immune system disorders, some elderly, and infants can be particularly at risk for infections. These people should seek advice about drinking water from their health care provides. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hottine at (800) 426-4791.

Where does my Water come from? The water source for Oak Harbor is one (1) well located on East Miami Drive which draws its water from the Miocene Series Aquifer.

Source Water Assessment and its availability - A Source Water Assessment Plan (SWAP) is available from the Mississippi State Department of Health for this system. This Plan is an assessment of a delineated area around our listed source through which contaminants, if present, could migrate and reach our source water. It also includes an inventory of potential sources of contamination within the delineated area, and a determination of the water supply's susceptibility to contamination by the identified potential sources.

Why there are contaminants is my Drinking Water? Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water pose a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hottine (800-426-4791). The sources of drinking water (both tap and bottled) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring needs and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife. Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production, and mining activities. In order to ensure that your tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

How can I get involved? In order to maintain a safe and dependable water supply, we sometimes need to make improvements that will benefit all our customers. If you have a particular question about your water supply, please contact Billy Bouchillon @ 1-855-340-0111.

Additional Information for Lead - If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Oak Harbor Water supply is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <a href="https://www.epa.gov/safewater.lead">https://www.epa.gov/safewater.lead</a>. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact (601) 576-7582 if you wish to have your water tested.

Monitoring & Reporting of Compliance Data Violations - We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not your drinking water meets health standards.

Radionuclides - No violations were detected in the results for the Calendar Year 2013.

Beginning January 1, 2004, the Mississippi State Department of Health (MSDH) required public water systems that use chlorine as a primary disinfectant to monitor/test for chlorine residuals as required by the Stage 1 Disinfection By-Products Rule. We did complete the monitoring requirements and found no Maximum Residual Disinfectant Level (MRDL) violations.

Residuals	Sampling Period	Range (L	ow/High)	MCL RAA*	Units	RAA Date	RAA Your Water	Typical Source
Chlorine		0.20	0.89	4.0	mg/L	2013	0.60	Water additive used to control microhos
*PAA = Running Annual Av	07300						***************************************	The second of th

The water system was tested a minimum of one (1) monthly sample in accordance with the Total Coliform Rule. During the monitoring period covered by this report, the following detections were noted: There were NO positive bacteriological samples during the monitoring period of January 1st to December 31st, 2013.

In the table below, we have shown the drinking water contaminants that were detected during the calendar year of this report. The presence of contaminants does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done during the calendar year of this report. The EPA or the State required us to monitor for certain contaminant less than once per year because the concentrations of these contaminants do not change frequently.

Nitrates	Sample Date	MCL	Units	Your Water	Violation	Typical Source
Nitrate (as N)	1/31/13	10	ρpm	<0.08	No	Runoff from ferblizer use; leaching from septic tanks; sewage; erosion of natural deposits
Nitrate Nitrite (as N)	1/31/13	10	ppm	<0.2	No	Runoff from fertilizer use; leaching from septic tanks; sewage; erosion of natural deposits
Nitrite	1/31/13	1	ppm	0<.02	No	Runoff from fertilizer use; leaching from septic tanks; sewage; erosion of natural deposits

-	Lead & Copper	Date	90th Percentile	Unit	AL	Sites over Al	Tyoical Source
1	Lead	2009/2011	1.0	mg/L	0.015	0	Corrosion of household plumbing systems; erosion of natural deposits
	Copper	2009/2011	0.3	mg/L	1.3	0	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

DBP Contaminants	Sample Date	MCL	Unit	Your Water	Violation	Typical Source
	6/6/2013	80	ppb	11.03	No	By-product of drinking water disinfection
Haloacetic Acids, Total (HAA5)	7/17/2012	60	ppb	30.0	No	By-product of drinking water disinfection

L	Inorganics	Sample Date	MCL	Unit	Your Water	Violation	Typical Source
	Barium	May 16, 2011	2	opm	0.0144	No	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
L	Chromium	May 16, 2011	0.1	opm	< 0.0005	No	Discharge from steel & pulp mills; erosion of natural deposits
L	Fluoride	May 16, 2011	4	ppm	0.33	No	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer & aluminum factories

In accordance with the Radionuclides Rule, all community public water supplies were required a sample quarterly for radionuclides beginning January 2007. December 2007. Your public water supply completed sampling by the scheduled deadline, however, during an audit of the Mississippi State Department of Health Radiological Health Laboratory, the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice. Although this was not the result of inaction by the public water supply, MSDH was required to issue a violation. This is to notify you that as of this date, your water system has completed the monitoring requirements and is now in compliance with the Radionuclides Rule. If you have any questions, please contact Karen Walters, Director of Compliance & Enforcement, Bureau of Public Water Supply, at (601)576-7518.

Thank you for allowing us to continue to provide your family with clean, quality safe drinking water this year. In order to maintain a safe and dependable water supply, we sometimes need to make improvements that will benefit all of our customers. Please call our office if you have any questions.

We at Utility Services, work around the clock to provide top quality drinking water to every tap of every customer of the Oak Harbor Water System. We ask that all our customers help us to protect and conserve our water sources, which are the heart of our community, our way of life, and our children's future.

### OAK HARBOR CCR Hancock County, Mississippi

and Lablah L

Public Water Supply I.D. No. MS0230004

The Water We Drink - - Utility Services, LLC is pleased to present our Annual Water Quality Report for the year 2013. This report is designed to inflorm you about the quality of services we deliver to you every day.

Is My Water Safe? Yes, last year your tap water met all U.S. EPA and state drinking water standards. Utility Services diligently safeguards its water supplies and once again we are proud to report that our system has not violated a maximum contaminant level (MCL) or any other drinking water quality standards.

Do I need to take any special precautions? Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/Aids or other immune system disorders, some elderly, and infants can be particularly at risk for infections. These people should seek advice about drinking water from their health care provides. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline at (800) 426-4791.

Where does my Water come from? The water source for Oak Harbor is one (1) well located on East Miami Drive which draws its water from the Miocene Series Aquifer.

Source Water Assessment and its availability - A Source Water Assessment Plan (SWAP) is available from the Mississippi State Department of Health for this system. This Plan is an assessment of a delineated area around our listed source through which contaminants, if present, could migrate and reach our source water. It also includes an inventory of potential sources of contamination within the delineated area, and a determination of the water supply's susceptibility to contamination by the identified potential sources.

Why there are contaminants is my Drinking Water? Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water pose a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap and bottled) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife. Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production, and mining activities. In order to ensure that your tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

How can I get involved? In order to maintain a safe and dependable water supply, we sometimes need to make improvements that will benefit all our customers. If you have a particular question about your water supply, please contact Billy Bouchillon @ 1-855-340-0111.

Additional Information for Lead - If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Oak Harbor Water supply is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater.lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact (601) 576-7582 if you wish to have your water tested.

Monitoring & Reporting of Compliance Data Violations - We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not your drinking water meets health standards.

### Radionuclides - No violations were detected in the results for the Calendar Year 2013.

Beginning January 1, 2004, the Mississippi State Department of Health (MSDH) required public water systems that use chlorine as a primary disinfectant to monitor/test for chlorine residuals as required by the Stage 1 Disinfection By-Products Rule. We did complete the monitoring requirements and found no Maximum Residual Disinfectant Level (MRDL) violations.

Γ	Residuals	Sampling Period	Range (Lo	ow/High)	MCL RAA*	Units	RAA Date	RAA Your Water	Typical Source
	Chlorine	Jan-Dec 2013	0.20	0.89	4.0	mg/L	2013	0.55	Water additive used to control microbes

\*RAA = Running Annual Average

The water system was tested a minimum of one (1) monthly sample in accordance with the Total Coliform Rule. During the monitoring period covered by this report, the following detections were noted: There were NO positive bacteriological samples during the monitoring period of January 1st to December 31st, 2013.

In the table below, we have shown the drinking water contaminants that were detected during the calendar year of this report. The presence of contaminants does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done during the calendar year of this report. The EPA or the State required us to monitor for certain contaminant less than once per year because the concentrations of these contaminants do not change frequently.

Nitrates	Sample Date	MCL	Units	Your Water	Violation	Typical Source
Nitrate (as N)	1/31/13	10	ppm	<0.08	No	Runoff from fertilizer use; leaching from septic tanks; sewage; erosion of natural deposits
